BSSI website — things we need from you

Revision 1 is done apart from the items below. Most of these are small, but a few change what the website tells a buyer, so we would rather ask than guess.

1. The phone number — we may have got this backwards

Point 10 said to move **+91 98135 71254 (Mr. Devanand)** to first position.

The problem is that the other number, **+91 81999 50046**, is the one WhatsApp runs on. Every "Get Today's Price" button, every enquiry form and the floating WhatsApp button all open a chat with that number. So if we showed Mr. Devanand's number at the top, a buyer would read one number and end up messaging a different one.

For now we have kept only **+91 81999 50046**, so what a buyer sees and what they reach are the same.

Tell us which you want:

- Keep only 81999 50046 (what is live now)
- Show both, Mr. Devanand's first, and accept that WhatsApp goes to the other
- Move WhatsApp across to Mr. Devanand's number — only if that number has WhatsApp active and he is the one who should take every enquiry

2. Certificates — we have nothing to work with

Point 13 asks for Indiamart, GST, MSME and Association certificates. No images have come through yet. Send us the files and we will build the section.

If they are photos of paper certificates rather than digital copies, that is fine — just take them square-on in decent light so the text stays readable.

3. Your differentiation — please read what we wrote

Your note said:

> "The pipes we make are of special light gauge up to 0.20 mm-2.00 mm thickness and for special industries use like bending use, heat exchanger, boiler condenser. & export qualitiy use material avaibalty It happens, as per customer required"

We could not put that on the site as written, so we rewrote it into four points on the About page. Every fact is still there — the 0.20–2.00mm light gauge, the bending and heat exchanger and boiler condenser work, export-quality material, and non-standard 6mm, 9mm and 12mm sizing.

Everywhere else on the site we have used your words exactly as you sent them. This is the one section where we have written for you, so please read it and confirm it says what you meant.

---

4. Two spellings we have left as you wrote them

- **"gaze"** — we have assumed you meant **gauge** and used that. Confirm.
- **"Gaziabad"** — usually spelled **Ghaziabad**. It is live as you sent it. Say the word and we will change it.

---

5. The handwritten size list — one number is unclear

We have used the sizes and thicknesses from your handwritten note, and they are live now:

- Thickness 0.20mm to 2.00mm
- Sizes 6, 8, 9, 10, 12, 15, 19, 20, 22, 25, 28mm, 1" x 1.5", 2", 3", 4"

Two things:

The 4" looks like it was written over another number. Since that is now the largest size the website advertises, please confirm it is 4 inch.

These are for the pipes you manufacture. Coils and sheets still show the figures from the earlier copy — 0.2mm to 5mm thickness, up to 1250mm width. If those are wrong too, send us the correct ones.

---

6. "Stainless Steel Sheets" is both a category and a product

In the menu and breadcrumbs it currently reads "Stainless Steel Sheets / Stainless Steel Sheets", which looks like a mistake even though it is not.

Renaming one of them would fix it — the product could become "Stainless Steel Sheets (Standard Size)", or whatever you would rather call it.

---

7. Small things we have already changed, so you are not surprised

These came out of your revision list but are worth flagging:

"Machinery & Equipment" is now "Hospital Equipments" as you asked. You only gave us the new name, so we have rewritten the description and the WhatsApp message underneath it to suit hospital equipment. Have a read.

"Cut to Length Coils" is gone completely — the page, the menu entries, the spec sheet, and the links from other pages. The Sugar Mill industry card used to point at it, so that now points at Coils instead.

The Director's Message. The three versions you sent were AI-written and read that way, so we have written a new one. It leads on the light gauge work, since that is the thing most mills will not do. It is signed by both directors — tell us if you want only one name.

Response time. Your Round Pipes copy said to change "two hours" to "within the hour", but the rest of your copy still says two hours in twenty-three places. The site says two hours everywhere. Confirm which is right.

---

8. Still outstanding from before

- **Privacy policy date** — the page needs the real launch date. It currently shows a placeholder.
- **SS 202 density** — you gave us 8.00 for 300-series and 7.75 for 400-series, but nothing for 200-series. The weight calculator needs it. Until then SS 202 is not offered in the calculator, because guessing a density would give buyers a weight that does not match what arrives.
- **Two photos are too small** — the Sheets and Machinery photos came through at around 350 pixels wide. We have enlarged them as far as they will go, but if the client has the originals they will look considerably better.

Anything on this list you are unsure about, ring us and we will talk it through.
