Section 2: Overview

Headline: Stainless Steel Round Pipes - Every Grade, Same-Day Price

Subheadline: The most-used pipe shape in the industry, and the one where getting the grade right matters more than on any other product.

Body: Bharat Stainless Steel Industries manufactures stainless steel round pipes in 200, 300, and 400 series grades - ERW, welded, and OD construction - from 6mm to 12 inches in size and 0.3mm to 8mm thickness, in standard 2B Prime finish, sourced from Jindal Stainless and dispatched from our Hisar, Haryana unit to 210+ cities.

Round pipe is the most widely used shape across structural, decorative, and process applications, chosen for its strength-to-weight ratio and ease of fabrication compared to other profiles. If you're searching for a stainless steel pipe manufacturer near me in Haryana, our Hisar plant supplies with same-day pricing on WhatsApp rather than a quote you wait days for.

That range of use cases is exactly why grade selection matters most on this specific product - a decorative indoor railing and a submersible pump housing have very different corrosion demands, even though both use round pipe of similar size.

We stock across 202, 304, and 316 grades specifically to match pipe to application, not to push whichever grade is sitting in stock that week.

Section 3: Spec Table

Headline: Round Pipe Specifications

Sub-headline: Full technical range at a glance - thickness, size, grade, type, and finish, confirmed before every order.

Spec	Detail
Thickness	0.3mm – 8mm
Size (OD)	6mm – 8 inch, 10 inch, 12 inch
Grade	200, 300, 400 series
Type	ERW, Welded, OD pipes
Finish	2B Prime

Quick terms:

- ***2B*** = the standard smooth, matte cold-rolled finish used across the industry
- **ERW** = Electric Resistance Welded, the most common pipe construction method
- **OD** = Outer Diameter, the actual measured outside width of the pipe

Section 4: Why Bharat Stainless

Headline: Why Bharat Stainless Steel Industries?

Subheadline: Why round pipe buyers specifically choose Bharat Stainless Steel Industries

Body: Round pipe is the shape Bharat Stainless Steel Industries sells across the broadest range of industries - from decorative railing to submersible pump housings - which means our round pipe stock spans all three grade series (200/300/400) at full thickness and size range, not a narrow subset.

Every length is sourced from Jindal Stainless and confirmed on our Dharam Kanta (weighbridge) before dispatch.

12+ years supplying this specific shape across 650+ customers has taught us that the grade conversation matters more here than on any other product - get it right, and a pipe outlasts its application by years; get it wrong, and it can fail within one wet season.

Section 5: Applications

Headline: Where Our Round Pipe Actually Gets Used

Subheadline: From railway coach fabrication to submersible pumps - real industries where the right grade decides how long the pipe lasts.

Body: Railway coach and metro fabrication, where finish consistency matters for daily public use · automobile machinery and accessories · elevator structural work · steel furniture, where 2B finish reduces post-fabrication polishing · general machinery and equipment · submersible pumps, where the SS 202 vs SS 304 decision genuinely affects product lifespan.

Section 10: FAQs

Headline: Frequently Asked Questions

Sub-headline: What round pipe buyers usually ask before ordering.

Body:

FAQs 1: What is the difference between NB and OD in stainless steel pipes?
Answer: NB (Nominal Bore) is an approximate internal-diameter naming convention; OD (Outer Diameter) is the actual measured outer diameter. Buyers sometimes confuse the two, especially from an older drawing, we confirm both measurements before manufacturing to avoid a fitting mismatch on delivery.

FAQs 2: What is the difference between 200 and 300 series stainless steel?
Answer: 300-series (SS 304, SS 316) contains more nickel, giving better corrosion resistance - common in food, pharma, and marine or high-moisture environments. 200-series (SS 202) substitutes some nickel with manganese, more affordable for structural and decorative uses. The grades can look identical when new, which is why some suppliers substitute one for the other without disclosure, we always confirm which grade you're ordering.

FAQs 3: What is the price of SS 304 round pipe per kg?
Answer: Changes daily with the market rate. Message your exact size and quantity on WhatsApp for today's rate, usually within the hour.

FAQs 4: Do you supply ex-works or with delivery?
Answer: Both - ex-works means you arrange freight from our plant; FOR (Free on Road) includes delivery to your site. Tell us your preference when you enquire.

FAQs 5: Your round pipe looks the same as a cheaper competitor's - what's actually different?
Answer: Grade and finish consistency across the batch, and weighbridge-verified weight at dispatch. Two round pipes can look identical when new and behave very differently after a year of use if the grade was substituted or the finish wasn't consistent. Ask us for the grade and finish confirmation in writing before you order, we'll give it.

Section 11: Bottom CTA

Headline: Ready to Order Round Pipe?

Sub-headline: Share your size, grade, and quantity - we usually reply within two hours with today's actual rate.
