INTERNAL — FOR PRABHAS ONLY. DO NOT SEND.

Payouts, explained. And every answer for the call.

You asked whether the payout module has real payments in it. It does not, and that is the correct design. This explains how it actually works, in plain English, so you can explain it to him with confidence — plus the answer to every question he is likely to ask.

3 AUGUST 2026 · QCRED FEEDBACK CALL

THE SHORT ANSWER

No, there is no real payment in it

There is **no payment gateway, no bank API, and no money moving through the software.** I checked the whole codebase — the only payment-ish word in it is `cashfree`, and that appears as a *KYC verification* provider option, never for moving money.

What the payout module actually is

It is a **ledger and an approval workflow**. It works out what is owed, controls who is allowed to approve it, records that it was paid, and shows the partner. **A human still makes the transfer in the bank.** That is exactly how nearly every DSA and NBFC in India runs commissions.

Say it like this, and it sounds like a decision — because it is one

“The system calculates the payout, controls who can approve it, and keeps the full record with the UTR. The actual transfer happens in your bank, the way it does today. We deliberately did not put money movement inside the CRM — that needs a payout licence or a bank integration, and it means the software would be holding your funds. Most lenders and DSAs run it exactly this way.”

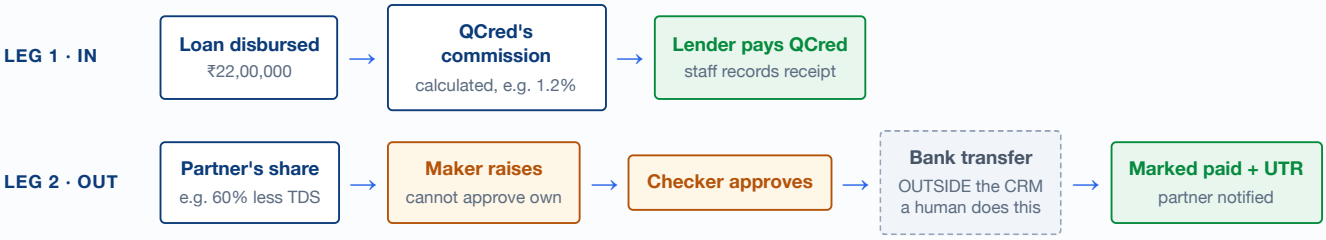

What it does versus what it does not

The CRM does this	The CRM does NOT do this
Calculates commission from the lender programme, including target bonus	Transfer money to a partner's bank account
Splits QCred's share and the partner's share, deducts TDS	Connect to a bank or a payment gateway
Enforces that the person who raises a payout cannot approve it	Hold or move QCred's funds at any point
Records the UTR, mode and date once paid	Auto-verify that the transfer actually landed
Notifies the partner and shows it in their Earnings	Generate a bank file or trigger a NEFT batch *(possible later)*
Tracks whether the **lender** has paid QCred yet — separately	Reconcile the bank statement automatically *(possible later)*

HOW IT WORKS

The money, step by step

The thing to get across is that there are **two separate flows of money**, and the CRM tracks both. Most CRMs only track the second one, which is why partners end up chasing money the company itself has not received yet.

The dashed box is the only step the software does not perform — everything either side of it is recorded.

The worked example — use these exact numbers on the call

Step	Amount	Where it comes from
Loan disbursed	`₹22,00,000`	Typed in when the lender confirms
Programme payout rate	`1.200%`	From the lender programme — not typed per case
Base commission	`₹26,400`	Calculated
Target bonus (0.25%)	`₹5,500`	Applied because monthly volume crossed the slab
QCred earns	`₹31,900`	Base + bonus — this is Leg 1
Partner share (60%)	`₹19,140`	Calculated
TDS (5%)	`₹957`	Deducted
Partner receives	`₹18,183`	This is what gets transferred — Leg 2
QCred keeps	`₹12,760`	Shown on the payout file

> **Why the two legs matter — this is your strongest point**
>
> At any moment QCred can answer: **"are we waiting to be paid, or waiting to pay?"** A payout can sit at *approved but the lender has not paid us yet* — and that is visible, rather than a partner ringing up angry about money QCred does not have. The reference CRM he showed you does not separate these.

The five stages a payout passes through

Stage	Meaning
`brand_commission_generated`	We have worked out what the lender owes QCred
`partner_commission_generated`	The partner's share is approved by a checker
`brand_payout_received`	The lender has actually credited QCred
`partner_payout_paid`	QCred has paid the partner, UTR on record
`error`	Something failed — visible, not silently lost

ON THE CALL

Every question he'll ask, answered

“So can we pay partners directly from the system?”

No — and that is deliberate. “The system tells you exactly who to pay and how much, and locks the approval. You make the transfer from your bank, then record the UTR. Putting money movement inside the software means it holds your funds, which needs a payout licence or a bank integration. If you want that later, it's a separate integration we can price.”

Do not apologise for this. It is the normal, correct architecture.

“Can we add automatic payouts later?”

Yes, and here's the honest shape of it. “There are bank payout APIs — RazorpayX, Cashfree Payouts, ICICI or Axis connected banking. It would need a QCred current account approved for that, their KYC, per-transaction charges, and a maker-checker sign-off we already have. It's an integration project, not a setting. Let's do it once the volume justifies it.”

Never say “yes I'll add it” on a call. Say “it's an integration, I'll price it.”

“How does the system know the payout percentage?”

From the lender programme. “Each lender has programmes — Salaried Prime, Self-employed LAP and so on. Each programme carries its own payout percentage and its target bonus slabs. When you book a disbursement you pick the programme, and the commission is calculated from it. You maintain those rates yourself in the Lenders screen.”

“What about the target bonuses?”

Best slab wins, not cumulative. “You set slabs like ‘₹1 crore in the month → extra 0.25%'. The system adds up the month's volume with that lender and applies the highest slab reached. It doesn't stack them, because lender schemes aren't written that way.”

If he says his lenders DO stack them, that's a 20-minute change. Don't argue, note it.

“Who can approve a payout?”

Anyone with the Checker permission — but never the person who raised it. “The system blocks it. Maker raises, Checker approves, and it physically will not let the same login do both. That's the control your lenders and auditors expect.”

“What if the lender hasn't paid us yet?”

That's tracked separately. “There's a step to record that the lender has credited QCred. So you can see payouts you've approved but not yet funded — you decide whether to pay the partner ahead of receipt or wait.”

“Is TDS handled?”

Deducted and shown, but it isn't a tax filing. “The payout shows gross, TDS and net separately, and it's in the export for your CA. The CRM doesn't file returns or generate Form 16A — that stays with your accountant.”

Be clear on this boundary or he'll assume compliance is covered.

CAREFUL

Two things you must handle honestly

1 · The delivery PDF you sent says partners can self-register. Until today, they could not.

I ticked “Partner registration and login” and described a public registration form. There was no such page — partners could only be created by staff, and those accounts had no password so they could never log in. **He found it** — that's his “activation link not working”. It is fixed and live now.

If he raises it: “Self-registration and the invite links went live today — you can test them now.” Don't over-explain. Don't defend the document.

2 · The same PDF says marketing lets you upload creatives. It couldn't.

The page only accepted a pasted URL — it even had a footer admitting it. Real upload, tiles and download history are live now. Same handling: state it's live, move on.

COMMERCIAL

Where to hold the line

The lender module was not in the ₹1L scope

Programmes, FOIR/LTV, eligibility, payout rates and bonus slabs — none of that is in the 38-item list or the 5 milestones. It's built and he can use it. But say it once, plainly: *“The lender module and the auto-calculated payouts were beyond the original scope — I've built them because the system needs them, but let's agree they're part of a Phase 2 rather than absorbing them silently.”*

If you never say it, the next request will be the same size and free too.

The training videos are a feature, not a shoot

He wrote: videos “to ensure completeness of training **before it gets into queue for approval/activation**”. That is a training *module* — content attached to the §4 gate, with completion tracked. The recording is the small part.

Say: “The activation gate already blocks on training. Attaching video content and tracking completion is a small module — let's scope it once the screens are final, so we don't shoot the videos twice.”

BEFORE YOU HANG UP

What to get off the call

Get these off the call — don't hang up without them

What you need	Why it blocks you
Domain — e.g. `crm.qcred.in`	Milestone 2's ₹25,000 says “live on your domain”
Go-ahead on QCred-owned database + storage	So real data starts in their account, never migrated
BH or SH in partner codes	His own document says both. Cheap now, painful at 5,000 partners
Business Head — state-scoped or full book?	Decide before real staff accounts exist
Do lender bonus slabs stack?	Built as best-slab-wins. Confirm before real payouts run
Partner share % and TDS %	Currently 60% / 5% defaults — need his real numbers
Phase 2 agreed as Phase 2	Lender module + training module + apps

NEVER SAY

“It's fully complete” · “I'll add that” · “The apps will take X weeks” · “Finoza” by name · “It's live” (implies their domain)

SAY INSTEAD

“The web platform is complete, apps are next” · “Let me check if that's configuration or development” · “I'll give a firm timeline once feedback is locked” · “the reference CRM you shared” · “live for your review”
