QCred.in

Credit. Credibility. Confidence

DELIVERY DOCUMENT · MILESTONE 1 & 2

Core CRM & Channel Partner Portal

Built, deployed and verified for QCred.in

This document records exactly what has been delivered against the scope QCred shared, how each part works, who can see and do what, and the step-by-step guides your team needs to start using the platform. Every item marked complete in this document has been tested on the live deployment, not just written in code.

PREPARED FOR	PREPARED BY	DATE	LIVE AT
QCred.in Simply Insights LLP	24dev Prabhas Raju	1 August 2026	qcred-crm.vercel.app

SECTION 01

Where the project stands

The web platform — the Core CRM and the Channel Partner Portal — is **complete, deployed and working**. You can log in today and use every screen described in this document. The mobile applications are a separate milestone and have not been started yet; they begin once you sign off on the web platform.

#	Milestone	Status	Value
1	Project kick-off	Complete	₹15,000
2	CRM + Advisor/Partner portal live	Built & verified — pending your domain	₹25,000
3	Android application	Not started	₹20,000
4	iOS application	Not started	₹20,000
5	Source code handover	On completion	₹20,000

What "built & verified" means here

The platform is running on a live server with a live database. 49 automated checks covering every screen, every role and every access rule pass against the live deployment, plus 11 further checks confirming your partner coding framework appears correctly on screen. Document uploads were tested end to end, including confirming that a signed-out visitor is refused access to a customer's KYC file.

The one thing still needed from QCred for Milestone 2

Milestone 2 is defined as the CRM being live on **your** domain with your team using it. Today it runs on our deployment so you can review it. To complete the milestone we need (a) the domain or subdomain you want it on, for example `crm.qcred.in`, and (b) confirmation to create the production database and document storage under a QCred-owned account. Both are short tasks once you decide — see Section 11.

The platform in numbers

21 screens	12 in the CRM, 9 in the Partner Portal
38 of 38 scope items	Every item on your Core CRM and Channel Partner lists — Sections 2 and 3
11 roles	From Super Admin down to Connector, each with its own permissions — Section 6
52 permissions	Across 14 modules, individually assignable
18 lead stages	The full pipeline from Pending to Disbursed, including query and rejection states
10 lenders · **9** products	Pre-loaded, editable by you without a developer
7 states · **24** cities	Seeded exactly from your coding framework document

SECTION 02

Your Core CRM list — item by item

The 19 items exactly as you sent them, with where each one lives in the product.

#	What you asked for	Status	How it works & where to find it
1	Secure Admin and staff login	✓ Done	Phone + password sign-in. Passwords are hashed, never stored readable. Sessions are signed and held in a secure cookie that JavaScript cannot read.
2	Dashboard with lead and business summaries	✓ Done	**Dashboard** — live counts by stage, disbursed value, payout position, this month vs last, and a breakdown by product and by partner. Every number is clickable and opens the filtered list behind it.
3	Lead management	✓ Done	**Leads** — create, edit, search, filter, assign, export. Each lead opens a full file with customer details, documents, lender applications, remarks and history.
4	Product-wise lead management	✓ Done	Filter leads by product anywhere in the CRM; the dashboard shows a product-wise split, and reports break down volume and conversion per product.
5	Lead assignment and reassignment	✓ Done	Assign a lead to any staff member, and reassign later. Every handover is written to the lead's history with who moved it, when, and why.
6	Lead status and sub-status management	✓ Done	18 stages with sub-statuses beneath them. You add, rename or reorder stages yourself in **Settings** — no developer needed.
7	Follow-up details, remarks and activity history	✓ Done	Each lead has a running conversation log plus an automatic activity trail. Remarks can be marked internal — those are never shown to the partner.
8	Channel Partner management	✓ Done	**Partners** — the full network with tier, code, geography, reporting line and performance. Each partner opens a file with 5 tabs.
9	Partner registration approval	✓ Done	New registrations arrive as *Pending*. Approval is a deliberate step, and it is blocked until training is recorded — your framework, §4.
10	Partner activation, suspension and management	✓ Done	Activate, suspend or reject with a reason. A suspended partner cannot sign in or submit leads; their existing leads stay intact and visible to you.
11	Team and sub-partner management	✓ Done	The four-tier hierarchy from your framework document. Every partner shows who they report to and who reports to them — Section 5.
12	Product and service management	✓ Done	**Products** — 9 loan products, each with its own application fields, commission rate and lender list. Add or edit products yourself.
13	Document viewing and verification	✓ Done	Customer and partner documents upload to private storage. Staff view, verify or reject with a remark; a rejected document can be re-uploaded by the partner.
14	Payout and commission management	✓ Done	Commission is **calculated** from the disbursed amount and the product rate, then tracked through both legs of the money trail — Section 8.
15	Marketing material management	✓ Done	**Marketing** — upload creatives, brochures and posters; publish to partners, or archive. Partners see only what is published.
16	Notifications and announcements	✓ Done	**Announcements** — publish to all partners or a chosen tier. Partners see them on their dashboard and notifications screen.
17	Reports and analytics	✓ Done	**Reports** — lead, disbursement, partner-performance and payout reports, each filterable by date, product, state, partner and status, and exportable to CSV for Excel.
18	User roles and access permissions	✓ Done	11 roles and 52 permissions, editable in **Settings**. Also controls *how much data* a role sees, not only which buttons — Section 6.
19	Profile and account settings	✓ Done	**Profile** for personal details and password; **Settings** for company-wide configuration including stages, numbering, roles and lenders.

SECTION 03

Your Channel Partner list — item by item

All 19 items are delivered in the partner **web** portal. The mobile apps are Milestone 3 and 4 and will carry the same features.

#	What you asked for	Status	How it works
1	Partner registration and login	✓ Done	Public registration form; the partner then signs in with phone and password.
2	Admin approval before account activation	✓ Done	A newly registered partner can sign in but cannot submit business until your team approves and activates them. They see exactly what is pending.
3	Partner dashboard	✓ Done	Their own totals — leads by stage, disbursed value, earnings paid and pending — plus quick-launch tiles for each product.
4	View available financial products	✓ Done	**Products** — every active product with description, eligibility and commission, and a one-click start.
5	Submit new customer leads	✓ Done	**Submit lead** — the lead lands in your CRM instantly with the partner's code attached, so attribution is never in doubt.
6	Product-specific application forms	✓ Done	The form changes with the product — a Home Loan asks about property and balance transfer, a Business Loan asks about turnover and vintage.
7	Upload customer documents	✓ Done	PAN, Aadhaar, bank statements and more. Files go to private storage; if your team rejects one, the partner sees the reason and can replace it.
8	View all submitted leads	✓ Done	Their full history — and, for a Sub-DSA, their team's leads too, because their data scope covers their network.
9	Search and filter leads	✓ Done	Search by name, phone or lead number; filter by product, stage and date.
10	Track lead status and processing progress	✓ Done	A visual journey showing every stage the file has passed through, with timestamps.
11	View CRM remarks and rejection reasons	✓ Done	Partner-visible remarks and rejection reasons are shown in full. Remarks your team marks internal stay hidden — this is enforced in the database query, not merely hidden on screen.
12	View lead activity history	✓ Done	The same timeline your team sees, filtered to what a partner is allowed to see.
13	Team and sub-partner management	✓ Done	**My team** — invite sub-partners, see their codes, status and production. A Sub-DSA sees their Connectors; a Connector sees only themselves.
14	Payout summary and payout history	✓ Done	**Earnings** — commission earned per lead, what is paid, what is pending, with reference numbers.
15	Basic performance reports	✓ Done	Conversion, product mix and month-on-month trend for their own network.
16	Marketing tools and promotional materials	✓ Done	**Marketing** — download whatever your team has published.
17	Product and offer information	✓ Done	Rates, eligibility and lender policies, kept current from the CRM.
18	Notifications	✓ Done	Announcements and status changes on their own leads.
19	Profile, business and bank-detail management	✓ Done	16 fields across personal, business, address and bank tabs, plus documents and the signed agreement. A completion checklist shows exactly what is still missing.

SECTION 04

Delivered beyond the brief

These were not on your list. They were added because a loan-distribution business needs them, at no additional cost.

From studying how you actually work

Addition	Why it matters to QCred
One lead → many lenders	A single customer file can be sent to several lenders, each with its own application ID, status and timeline. Reality is that a file gets shopped around; the CRM now reflects that instead of forcing one lender per lead.
Apply More, with tracked links	From an open lead, apply to another lender in two clicks. The link carries your DSA code and the lead reference, so the lender can attribute the business back to QCred.
Lender policy library	Each lender's eligibility rules — minimum income, age band, credit score, accepted profiles — stored and visible while working a file, so staff stop guessing which lender fits.
Calculated commission	Commission is computed from the disbursed amount and the product rate rather than typed in or uploaded as a PDF. Fewer disputes, and the arithmetic is always auditable.
Two-leg money trail	Tracks both what the lender owes QCred and what QCred owes the partner, as separate legs — so you always know whether you are waiting to be paid or waiting to pay.
Maker–checker on money and activation	The person who raises a payout cannot approve it, and the person who onboards a partner cannot activate them alone. Standard financial-services control, enforced by the system.
Click-to-call and WhatsApp	Every customer and partner number is a tap away from a call or a WhatsApp chat, on desktop and mobile.
Full audit trail	Who changed what, when, and from where — across leads, partners, payouts and settings. Critical when a partner disputes a commission months later.
Escalation matrix	Your framework's routing built in, including the rule that a suspected compliance or fraud issue goes straight to HQ Compliance, bypassing the normal chain.
Configurable numbering	Lead and partner code formats are settings, not code. You can add the state or product segment to customer codes yourself — Section 5.

Built to keep you free of lock-in

Integration rails, ready to switch on

PAN, Aadhaar, bank-account and credit-bureau checks are wired as a *verification* step that today runs manually. When you buy an API, we connect it behind that step — no screens change and no re-work is billed. The same pattern is used for document storage and SMS.

No third-party sign-in dependency

Login is built into your own system rather than rented from a vendor. There is no per-user fee as your partner network grows toward 5,000+, and nothing to migrate later.

Where we improved on the reference CRM you shared

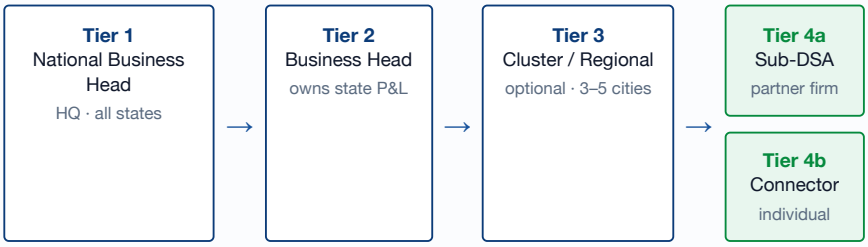

Commission is calculated instead of uploaded as a PDF. Reports are filterable and exportable instead of static tables. Every pipeline stage has its own distinct colour rather than five colours recycled across eighteen stages. The current screen is always highlighted in the navigation. Numbers on the dashboard are clickable and drill through to the records behind them.

SECTION 05

Your partner structure & coding framework

Implemented section by section from “Channel Partner Organization Structure & Coding Framework”, July 2026.

The four tiers, live in the system

Origination sits with Tier 4. A Connector may report to a Sub-DSA or directly to the state team.

Code format — exactly as specified in §5

Tier	Format	Live example	Rule applied
Business Head	`QC-[STATE]-BH-[##]`	`QC-MH-BH-01`	No city segment, 2-digit sequence
Cluster / Regional	`QC-[STATE]-CH-[##]`	`QC-UP-CH-01`	State level, 2-digit
Sub-DSA	`QC-[STATE]-[CITY]-SDA-[####]`	`QC-MH-MUM-SDA-0001`	City segment, 4-digit
Connector	`QC-[STATE]-[CITY]-CON-[####]`	`QC-KA-BLR-CON-0001`	City segment, 4-digit

Two rules from §5 and §6 that are enforced, not just documented

Sequences run per state-city-type combination, not globally. `QC-MH-MUM-SDA-0001` and `QC-MH-PUN-SDA-0001` both exist and neither collides.

Codes are permanent and never reused, even after a partner exits. The next number is taken from the highest ever issued, so deleting or offboarding a partner can never free their number for someone else — which would otherwise corrupt your commission audit trail.

Governance rules in force

Governance rules from §2, §3 and §4

Your rule	Status	How the system enforces it
§4 — Training is mandatory before code activation	✓ Enforced	Activation is refused until training is recorded against the partner. The block is shown on their file with the reason.
§3 — Connectors may not collect KYC unless certified	✓ Enforced	An uncertified Connector is flagged and blocked from KYC handling. Sub-DSAs carry the right inherently.
§2 — Cluster layer advised beyond ~250 partners in a state	✓ Built in	The system watches state partner counts and advises when a state crosses the threshold.
§4 — Six review activities on a fixed cadence	✓ Built in	All six — weekly pipeline through annual re-certification — with owner and frequency, recorded per partner.
§4 — Escalation matrix, incl. compliance bypass	✓ Enforced	Issues route by level; a suspected compliance or fraud issue goes directly to HQ Compliance and is marked as having bypassed the chain.
§5.1 / §5.2 — State and city code tables	✓ Loaded	All 7 states and 24 cities seeded from your document, not invented. New cities are added by you.
§6 — Central code register, permanent codes	✓ Enforced	The partner list is the register; the database physically prevents two partners sharing a code.

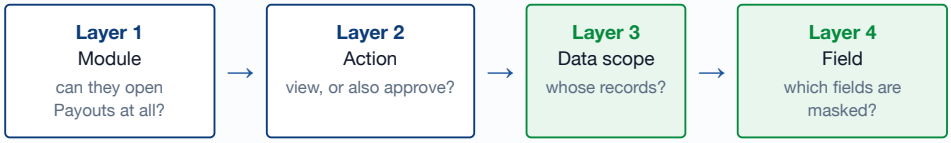

One point in your document needs a decision

§5 describes the partner type letters as **SH** (State Head), while §5.3 and the format table both say **BH** (Business Head). We have used **BH**, matching the majority and your tier naming — and made it a setting, so switching every code to SH is a change you make in Settings, not a development request. Please confirm which you want before the network grows.

SECTION 06

Logins and access levels

You asked that access depend on login level. It does — and in four layers, not one.

Layer 3 is the important one — it filters the database query itself, so restricted data is never sent to the browser.

Data scope — the difference between hiding and not sending

Scope	Who has it	What it means
own	Maker, Relationship Manager, Connector	Only records they created or are assigned. Another RM's leads do not exist as far as their screen is concerned.
team	Partner (Sub-DSA)	Their own records plus every sub-partner beneath them in the hierarchy.
all	Super Admin, National Head, Manager, Checker, Auditor	The whole book.

This is applied inside the database query. A restricted user cannot reach another user's record even by typing its address directly into the browser — there is nothing to return.

Four layers of access control

Section 06 · continues

Who can do what

Role capability matrix

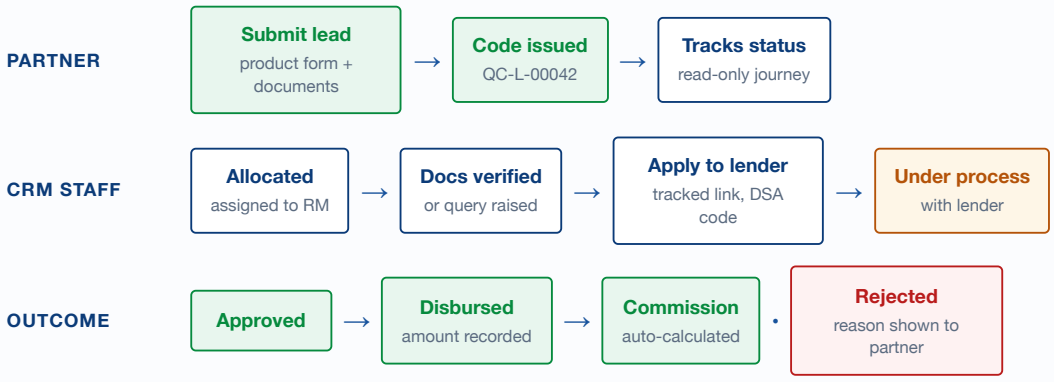

Role	Leads	Partners	Approve partner	Payouts	Approve payout	Docs verify	Products	Reports	Employees	Settings	Audit	Scope
Super Admin	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	all
National Business Head	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	all
Manager	✓	✓	✓	✓	✓	✓	–	✓	–	–	–	all
Divisional Manager	✓	✓	✓	✓	✓	✓	–	✓	view	–	–	all
Business Head (State)	✓	✓	✓	✓	–	✓	–	✓	–	–	–	all
Checker	view	view	✓	view	✓	✓	–	✓	–	–	–	all
Maker (Staff)	✓	–	–	**raise**	–	–	–	✓	–	–	–	**own**
Relationship Manager	✓	view	–	–	–	–	–	✓	–	–	–	**own**
Viewer / Auditor	view	view	–	view	–	–	–	✓	–	–	✓	all
Partner (Sub-DSA)	**own**	–	–	view	–	upload	view	**own**	–	–	–	**team**
Connector	**own**	–	–	view	–	upload	view	–	–	–	–	**own**

"view" = read only · "raise" = can create but not approve · "own/team" = limited to their own data scope. Every one of these 52 permissions is individually switchable in Settings; the roles above are starting points, not fixed.

> **Segregation of duties — why Maker and Checker exist**
>
> A Maker can raise a payout but never approve it. A Checker can approve and mark it paid but cannot raise one, and cannot see leads outside a read-only view. The same split applies to partner activation. This means no single staff member can move money from creation to payment on their own — the control auditors and lenders expect from a distribution business.

SECTION 07

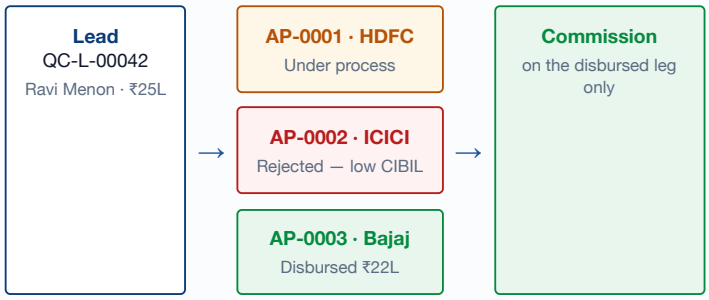

How a lead moves — deep dive

Every transition is timestamped and written to the lead's history with the user who made it.

One lead, many lenders

A file rarely goes to one lender. Each application is tracked separately, so a customer can be rejected by one lender and disbursed by another without losing either record.

"Apply More" opens the lender with your DSA code and the lead reference embedded in the link.

The 18 stages

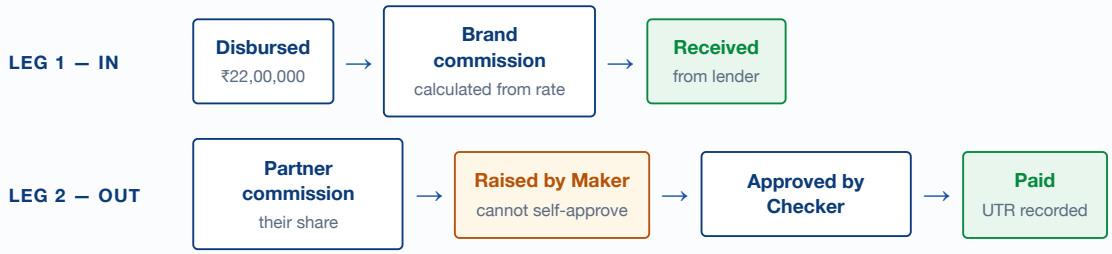

Pending · Allocated · Submitted · Under-Process · Docs Query - EA · Docs Query - LA · Login · Credit Review · Approved · Sanctioned · Agreement · Disbursed · Part-Disbursed · On Hold · Issue Raised · Issue Resolved · Rejected · Dropped.

Each has its own colour so a list can be read at a glance, and each can carry sub-statuses. You can rename, reorder or add stages in Settings without a developer.

SECTION 08

Commission and payouts — deep dive

Money is tracked as **two separate legs**. Mixing them is the usual reason a distribution business cannot answer “are we waiting to be paid, or waiting to pay?”

Each stage is dated. Any failure is captured as an error state rather than silently disappearing.

Worked example

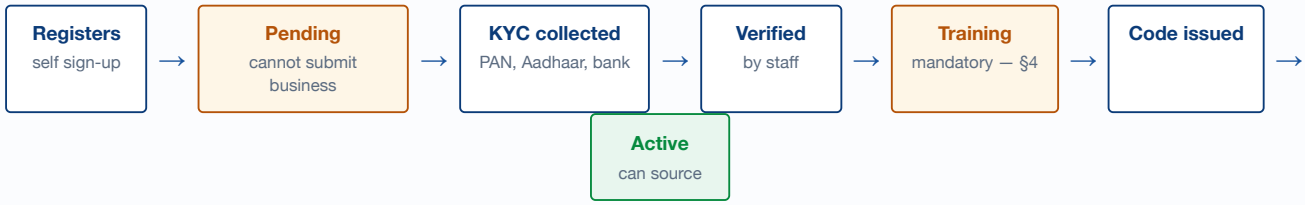

Step	Amount	Who does it
Loan disbursed	₹22,00,000	Recorded by staff from the lender confirmation
Product commission rate	1.20%	From the product master — not typed per lead
QCred earns from lender	₹26,400	Calculated automatically
Partner share	₹15,840	Per the partner's agreed share
QCred retains	₹10,560	Visible on the payout file

Why calculated, not uploaded

The reference CRM you shared required a commission PDF to be uploaded per payout. That makes every figure a manual entry and every dispute unresolvable. Here the arithmetic is derived from the disbursed amount and the product rate, shown on screen, and recorded in the audit trail — so when a partner questions a payout six months later, you can show exactly how it was reached.

SECTION 09

Partner onboarding and documents

Activation is refused if training is not recorded. The partner sees precisely which step is outstanding.

What a partner must complete

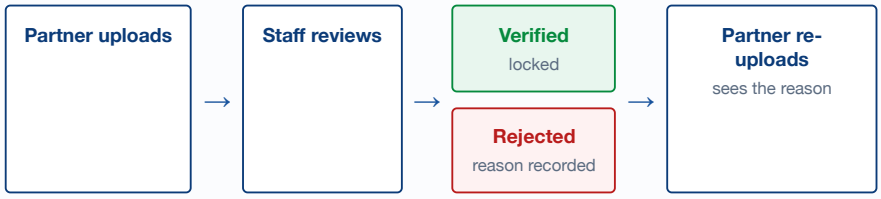

Their profile shows a live checklist. Until it is finished, the agreement stays locked — so no one is activated on half a file.

Requirement	Detail
Personal & business details	Name, trade name, category, PAN, Aadhaar, GST where applicable
Address	Full address with city, district, state and pincode
Bank details	Account, IFSC and holder name — required before any payout
Documents	PAN card, Aadhaar, cancelled cheque, photo
Agreement	Unlocks only when the above are complete

How documents are protected

> KYC files are identity documents, so they are held in **private** storage — not on a public web address. A file can only be opened through the application, which checks who is asking and whether that person is allowed to see that specific document. We verified this on the live system: a signed-in authorised user receives the file; a visitor who is not signed in is refused. Only JPG, PNG, WEBP and PDF are accepted, up to 5 MB.

Rejection and replacement

A rejected document can always be replaced — the partner is never left stuck without knowing why.

SECTION 10

Guides for your team

Signing in

Open **qcred-crm.vercel.app** and sign in with the phone number and password below. These are demonstration accounts with fake data, for review only — real accounts are created when the system moves to your domain.

Login	Password	Role	What to look at
9999900001	qcred@123	Super Admin	Everything — start here
9999900002	qcred@123	Maker (staff)	Notice the leads list is limited to their own — that is data scope working
9999900003	qcred@123	Checker	Can approve payouts, cannot raise them
9820011001	qcred@123	Partner — Sub-DSA QC-MH-MUM-SDA-0001	The partner portal, with a team beneath them
9820011010	qcred@123	Business Head QC-MH-BH-01	State-level partner code format
9820011013	qcred@123	Connector, untrained	See the activation block from §4 in action

Guide 1 — Approving and activating a partner

1. **Open Partners** and select the partner marked *Pending*.
2. **Check the Documents tab.** Verify each document, or reject it with a reason so the partner can replace it.
3. **Record training.** Until this is done, activation is blocked — this is your framework §4.
4. **Approve, then activate.** The partner code is issued automatically in the correct format for their tier and city.
5. **Tell them.** They can now sign in and submit business immediately.

Guide 2 — Working a lead to disbursement

1. **Open the lead** from Leads, or from any number on the dashboard.
2. **Assign it** to the relationship manager who will own it.
3. **Verify documents.** If something is missing, move the stage to *Docs Query* — the partner sees it and can respond.
4. **Apply to a lender** using *Apply More*. The link carries your DSA code so the lender attributes the business to QCred.
5. **Update the stage** as the lender progresses. Add remarks; mark them internal if the partner should not see them.
6. **Record the disbursement** with the final amount. Commission is calculated at this point.

Guides, continued

Guide 3 — Paying a partner

1. **Maker:** open Payouts and raise the payout against the disbursed lead. The amount is pre-calculated.
2. **Checker:** review and approve. The system will not let the same person do both.
3. **Make the transfer** in your bank, then mark it paid and record the reference number.
4. **The partner sees it** in their Earnings screen with the reference — fewer “where is my payout” calls.

Guide 4 — Configuration you can do yourself

To change	Go to
Add or rename a pipeline stage	Settings → Lead stages
Change the lead or partner code format	Settings → Numbering (with a live preview before saving)
Add a lender or edit its policy	Settings → Lenders
Change what a role can do	Settings → Roles & permissions
Add a product or change a commission rate	Products
Publish material to partners	Marketing → Upload → Publish
Announce something to the network	Announcements → New

SECTION 11

Security, and what happens next

How your data is handled

Area	Position
Passwords	Hashed, never stored or recoverable in readable form. Nobody at 24dev can read a user's password.
Sessions	Signed tokens in a secure cookie that JavaScript cannot access.
KYC documents	Private storage, served only through a permission check. Verified live: unauthenticated access is refused.
Access control	Enforced in the database query, not the browser — restricted records are never sent to the client.
Audit trail	Who did what, when, across leads, partners, payouts and settings.
Demonstration data	Every customer and partner in the current system is fictional. No real customer data has ever been placed on a developer machine or a developer-owned account.
Ownership	The platform runs on your own login system with no third-party per-user fees, and no vendor to migrate away from later.

To complete Milestone 2, we need two decisions from you

1. **The address.** Which domain should the CRM live on — for example `crm.qcred.in`? You point the domain at us; the certificate is automatic.
2. **The accounts.** Confirm we should create the production database and document storage under QCred ownership, so your live customer data sits in your accounts from day one rather than being migrated later.

Decisions and next steps

Open questions from your framework document

Question	Our recommendation
BH or SH for the Business Head code letters — your document uses both	Keep **BH**, which matches §5.3 and your tier naming. It is a setting either way, changeable before the network scales.
Should a Business Head see only their own state? §6 grants "state-wise edit access"	Today a Business Head sees the whole book. If you want them restricted to their state, we add a state-level data scope — a small change, best decided before staff accounts are created.

After your sign-off

Milestone	Value	What it covers
3 — Android app	₹20,000	The partner portal as a native Android application, same features, built for field use
4 — iOS app	₹20,000	The same for iPhone
5 — Source handover	₹20,000	Full source code, database and deployment handed to QCred

What we would like from you now

Please review the platform using the logins in Section 10 and tell us anything that does not match how QCred actually works. Changes at this stage are quick; changes after the mobile apps are built have to be made three times. Your feedback on the web platform is the most valuable thing you can give us this week.
