QCred.in

Credit. Credibility. Confidence

RESPONSE TO YOUR FEEDBACK · 3 AUGUST 2026

Your thirteen points, answered

Plus how payouts and the lender module work

Thank you for going through the platform properly — the two items you flagged as not working were real, and you were right to call them out. Both are fixed and live. This document answers every point you raised, and then explains the payout and lender modules in detail, since those are the ones you asked to discuss.

PREPARED FOR	PREPARED BY	DATE	LIVE AT
QCred.in Simply Insights LLP	24dev Prabhas Raju	3 August 2026	qcred-crm.vercel.app

SECTION 01

Your feedback, point by point

All thirteen items, in the order you sent them.

#	Your point	Status	What was done
1	Hierarchy visible in all accounts, one level above	✓ Done	Every account now shows a **Reporting line** — who they report to, with that person's contact number, their own position, and how many report in below.
2	Queue for approval / To-Do on login, based on role	✓ Done	A **Needs your attention** panel is the first thing on the dashboard. It is built from what that person can actually action — a Maker never sees payouts they cannot approve. Overdue items sort to the top.
3	Partner and employee activation link not working	✓ Fixed	You were right. Staff-created accounts had no way to set a password. There is now a proper invitation: the person receives a private link, sets their own password, and their account activates.
4	Training verification, with role-wise videos gating approval	◐ Partly	The activation gate already blocks until training is recorded. Attaching video content and tracking completion against it is a small module we would like to scope with you — see Section 4.
5	Invite Partner / Sub-partner / employee / Connector link not working	✓ Fixed	Also correct — that link pointed at a page that did not exist. Partners now generate real single-use invites from **My team**, and staff can invite from Partners and Employees.
6	How does the Payout module work — needs discussion	✓ Explained	Section 2 of this document walks through it end to end, including exactly what the system does and does not do with money.
7	Capture fees, interest rate, property value, LTV — payout auto-calculated from the lender module	✓ Done	Disbursement now records fees collected, interest rate, property value and tenure. LTV is calculated and stored. The payout is derived from the lender programme — Section 2 and 3.
8	Validation for Aadhaar, PAN and mobile on lead submission	✓ Done	PAN is format-checked, mobile must be a valid Indian number, and Aadhaar is checked against its **official checksum** — so a mistyped digit or two swapped digits is caught at entry, not by the lender days later.
9	Lead status and sub-status to be reviewable and changeable	✓ Done	In Settings you can now rename, recolour, reorder, mark final and delete stages and sub-stages. Deleting a stage that leads are sitting on is refused, so records are never orphaned.
10	Server time zone on timestamps	✓ Fixed	Correct — the server runs in UTC, so timestamps were around five and a half hours out. Every date and time in the system is now India Standard Time.
11	Marketing in tiled format, downloadable with history	✓ Done	Marketing is now a tiled gallery with image previews, files upload directly, and every download is recorded — who took what and when, visible to you.
12	Lender module — product programmes, payout, auto-calculation, target bonuses	✓ Done	A full module. Each lender carries programmes; each programme carries its own payout rate and target bonus slabs. Section 3.
13	Lender product variants — FOIR / LTV / property types / programmes	✓ Done	Each programme records FOIR and LTV ceilings, accepted property types, borrower profiles, CIBIL, age and income bands, rate range, processing fee, ticket size, tenure, assessment basis and business vintage. Where a lender publishes LTV as a grid or a tier-wise maximum — as Poonawalla does — those are held as published. See Section 3.

SECTION 02

How the payout module works

You asked to discuss this, so here it is in full — including the part most software is vague about.

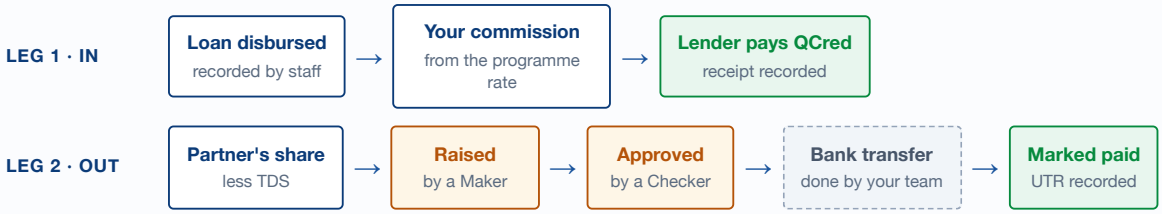

First, the important boundary: the CRM does not move money

There is no payment gateway and no bank connection inside the platform. The system calculates what is owed, controls who may approve it, and records that it was paid. **The transfer itself is made from your bank, by your team, exactly as it is today.**

This is deliberate. Moving money inside the software would mean the software holding your funds, which requires a payout licence or a direct bank integration. Nearly every distribution business in India runs commissions this way — the control comes from the approval trail and the audit record, not from the software touching the money.

The two legs

Money flows in two directions, and the platform tracks both separately. This is the part that prevents the most common dispute in the business — a partner chasing money that the lender has not yet paid you.

The dashed step is the only one outside the system. Everything either side of it is recorded and auditable.

SECTION 02 · CONTINUED

The numbers, and the controls

A worked example

Step	Amount	Where it comes from
Loan disbursed	₹22,00,000	Entered when the lender confirms
Programme payout rate	1.200%	From the lender programme — not typed per case
Base commission	₹26,400	Calculated
Target bonus at 0.25%	₹5,500	Monthly volume crossed the slab
QCred earns	₹31,900	Base plus bonus
Partner share	₹19,140	Their agreed percentage
TDS	₹957	Deducted and shown separately
Partner receives	₹18,183	The amount you transfer
QCred retains	₹12,760	Shown on the payout file

Segregation of duties

Whoever raises a payout cannot approve it — the system refuses, it is not a policy someone can forget. A different person with Checker permission approves, and a third step records the payment with its UTR. No single person can take a payout from creation to payment alone.

If you want automated transfers later

It is possible — through a bank payout facility such as RazorpayX, Cashfree Payouts or connected banking with your own bank. It needs a QCred account approved for that service, their onboarding, and carries per-transaction charges. The approval controls already in place are what such an integration would sit behind. Worth revisiting once volumes justify it.

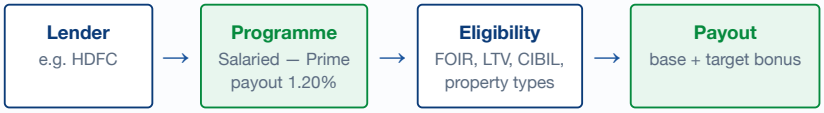

SECTION 03

The lender module

You asked for lenders to carry product programmes with payouts and product details, so commissions calculate themselves. That is what this is.

Why programmes, and not one rate per lender

A lender does not pay one commission. The same bank pays differently for a prime salaried case and a self-employed loan against property. So each lender holds as many programmes as they publish, and each programme carries its own payout and its own eligibility.

Choosing the programme at disbursement is what makes the commission calculate itself.

What each programme holds

Group	Fields
Eligibility	FOIR ceiling · LTV ceiling · minimum CIBIL · age band · minimum income · **assessment basis** (EBITDA, gross profit, gross receipts, GST turnover, banking) · **minimum business vintage** · accepted property types · borrower profiles
Commercials	Interest rate range · processing fee · minimum and maximum ticket size · maximum tenure · brochure link
Payout	Base payout percentage · target bonus slabs

SECTION 03 · CONTINUED

Lenders that publish grids

Where a lender publishes a grid rather than one number

Thank you for sharing the Poonawalla Fincorp LAP magazine — it changed how we modelled this. Their LTV is not a single figure, it is a grid by property type, and their maximum loan amount changes by city tier:

Poonawalla LAP	As published
LTV by property	Residential 80% · Commercial 75% · Industrial 55% · Land/Plot 50% · Specialised collateral 65%
Max loan by tier	Metro & Tier 1 ₹25 Cr · Tier 2 ₹7.5 Cr · Tier 3 & 4 ₹3 Cr *(Standard Income programme)*

Both are optional, and off by default

Plenty of your lenders will quote a single LTV and a single maximum, so the screen asks for one number each. Where a lender does publish a grid, you tick a box and fill only the cells they actually publish — anything left blank falls back to the single figure. A lender without a grid behaves exactly as before.

The Poonawalla *Standard Income (EBITDA)* programme is already loaded in the system with these exact figures, so you can see how it looks.

Target bonuses

You add slabs such as “₹1 crore in the month, extra 0.25%”. The system totals that month's volume with that lender and applies the **highest slab reached** — slabs do not stack, since lender schemes are normally written as a single improved rate rather than as accumulating tiers.

Please confirm two things

Do your lenders stack bonus slabs, or does the best one apply? We have built best-slab-wins. If any of your schemes accumulate, tell us before real payouts run.

What are your standard partner share and TDS percentages? The system currently uses 60% and 5% as placeholders. We will set your real figures.

Policy warnings

Where a file sits outside the programme it is being booked under — LTV above the ceiling, FOIR too high, ticket size out of range — the system can flag it rather than silently accepting it. Useful when a junior team member books a case against the wrong programme.

SECTION 04

Training, and what comes next

On the training videos

You wrote that you would like screen-recorded videos per role with a voice-over, so training completeness can be confirmed **before a partner enters the queue for approval or activation**.

Reading that carefully, there are two separate things in it:

What	Where it stands
The gate itself	Already built. Activation is refused until training is recorded against the partner, exactly as your framework §4 requires.
Video content attached to it	Not built. Videos per role, held in the system, with completion tracked before the gate opens — this is a small module and we would like to scope it with you.
The recordings	Best done once the screens are final. If we record now and this week's feedback changes a screen, every video has to be re-shot.

Our suggestion

Let your feedback settle this week, then we record the set in one pass and, if you want it, build the completion tracking into the activation gate at the same time. That way the videos are made once and they line up with what the system actually enforces.

What we would like from you

Decision	Why it matters now
The domain — e.g. `crm.qcred.in`	The platform moves onto your address and your team can start using it properly
Go-ahead to create the production database and document storage under QCred ownership	So your live customer data begins in your own accounts and never has to be migrated
BH or SH in partner codes	Your framework document uses both. It is a setting, but best fixed before the network grows
Business Head access — own state only, or the full book?	Best decided before real staff accounts are created
Bonus slabs — stack or best-slab?	Affects every payout figure
Partner share and TDS percentages	Currently placeholders

A note on scope, said plainly

The lender module, the programme-driven payout calculation and the training module were not part of the original scope list or the agreed milestones. We have built the first two anyway, because the system genuinely needs them and we would rather you had a platform that works than a narrow reading of a document. We would simply like them recognised as a second phase rather than absorbed silently, so that the mobile applications are not delayed behind further additions.
