INTERNAL — YOUR TESTING COPY. NOT FOR THE CLIENT.

Test everything before he does.

Every automated check passes — 49 platform, 21 + 6 feedback, 19 lender funnel, 11 framework, and a crawl of every screen under five logins with zero errors. What machines can't judge: wording, feel, and whether flows match how a loan business actually works. That's this script. Work top to bottom, tick as you go, note anything odd — even "this wording is weird" counts.

SETUP

Logins — all passwords `qcred@123`

Login	Role	Use it to test
9999900001	Super Admin	Everything — approvals, settings, lenders, employees
9999900002	Maker (staff)	Limited staff view · own-scope data · no-access page
9999900003	Checker	Payout approval · employee approval (corporate route)
9999900004	**Demo RM** *(new)*	The role the client complained about — partner page now works
9820011001	Partner (Sub-DSA)	Partner portal · team · invites · lender catalogue
9820011013	Connector (Girish)	Approved-but-untrained account — the §4 gate

> ⚠ **Two rules while testing**
>
> 1 · The client has real accounts now (Wahid, Krishna) and is using the system — **don't touch users you don't recognise**, don't change role permissions in Settings. 2 · Tests marked **[creates data]** leave rows behind. That's fine — tell me after and I'll clean, or leave them as extra demo content.

SUITE 1 · 5 MIN

The two pages he reported broken — as the RM

#	Do	Expect	OK
1	Log in as **9999900004** (RM)	**Dashboard loads; "Active partners" card IS visible**	☐
2	Click the Active partners card	**Partner list opens — no error page. Access-levels grid on top**	☐
3	Look at the dashboard again	**NO "Payouts pending" card (RM has no payout permission — card hidden, not broken)**	☐
4	Type `/payouts` into the address bar directly	**Friendly "You don't have access to payouts" page naming `payouts.view` — NOT an application error**	☐
5	Same trick as Maker (**9999900002**): visit `/settings`	**Same polite no-access page**	☐

SUITE 2 · 5 MIN

"Saving… / Updated" feedback

#	Do	Expect	OK
1	As Admin, open any lead → type a remark → click **Add remark**	**Button turns "Saving…" with spinner → flashes "Updated ✓" → remark appears. It's fast — watch the button as you click**	☐
2	Double-click a save button rapidly	**Second click does nothing (button locks while saving) — no duplicate remark**	☐
3	Try 3–4 other forms (status update, settings save, profile)	**Same behaviour everywhere**	☐

SUITE 3 · 10 MIN

Employee approval — the full loop *[creates data]*

#	Do	Expect	OK
1	As Admin → Employees → "Or invite by link" → name *Test Person*, any unused 10-digit mobile starting 6–9, role RM → **Create invite**	**Invite appears under "Open invitations" with a copyable link**	☐
2	Open that link in a **private/incognito window** → set a password → Activate	**Lands on login with "awaiting approval from your supervisor" message — NOT signed in**	☐
3	Try logging in as that new person	**Blocked with the same awaiting-approval message**	☐
4	Log in as **Checker** (`9999900003`) → look at the dashboard	**"New employees awaiting approval — 1" in the to-do queue**	☐
5	Employees → find *Test Person* → **Approve**	**"awaiting approval" badge becomes active status**	☐
6	Log in as the new person again	**Works now — lands on dashboard**	☐

SUITE 4 · 10 MIN

Reports-to and team-only data *[creates data]*

#	Do	Expect	OK
1	As Admin → Employees → on *Demo RM*, set "Reports to" = *Test Person* (from Suite 3) → **Set**	**Saves with the Updated flash**	☐
2	Leads → open any lead → **Reassign** it to *Demo RM*	**Lead now assigned to Demo RM**	☐
3	Settings → Roles → set the **RM role's data access to Team** *(remember to put it back to Own after — note current value first)*	**Saves**	☐
4	Log in as *Test Person* → Leads	**Sees the lead assigned to Demo RM (their team member) — but NOT every lead in the system**	☐
5	Log in as Demo RM → Leads	**Sees own assigned lead only (nobody reports to them)**	☐
6	Put RM data access back to **Own**	**—**	☐

SUITE 5 · 5 MIN

The §4 training gate — live

#	Do	Expect	OK
1	As Admin → Partners → open **Girish Hegde** (`QC-KA-BLR-CON-0001`)	**Governance panel: "Training · Mandatory before code activation (§4) · Pending". No Activate button exists**	☐
2	Click **Mark training complete**	**Training flips to Complete and the Activate button appears — the gate opening on screen**	☐
3	Partners list → check the access-levels grid at top	**Partner roles with permission counts + four tiers with live counts (the client's requested screen)**	☐

SUITE 6 · 10 MIN

Partner portal + lender catalogue

#	Do	Expect	OK
1	Log in as partner **9820011001** → **Lenders** in the menu	**Region → Lender → Product funnel with counts on every chip**	☐
2	Click **Poonawalla Fincorp**, inspect the table	**LTV grid per property (Industrial 55%…), tier-wise max (Metro ₹25 Cr / Tier 3&4 ₹3 Cr), FOIR, rates — but NO Payout column**	☐
3	Same page as Admin (`/lenders`)	**Same funnel WITH the green payout % column, and a "Manage lenders" toggle**	☐
4	As partner → My team → invite a connector (name + unused mobile) *[creates data]*	**Real link appears under Open invitations; opening it in incognito shows the accept form**	☐
5	Submit a lead with PAN `BADPAN` , then mobile starting with 1	**Each rejected with a specific message naming the field**	☐
6	Aadhaar `1234 5678 9012` on a lead	**Rejected — fails the official checksum, not just a length check**	☐

SUITE 7 · 10 MIN

Money flow end to end *[creates data]*

#	Do	Expect	OK
1	As Admin → Disbursements → on a sanctioned case, pick lender + **programme (Poonawalla — Standard Income)**, enter disbursed ₹22,00,000, property value ₹40,00,000, rate, tenure → **Record**	**Records; LTV computed automatically (55% here)**	☐
2	Payouts → open the auto-raised payout	**Calculated from the programme % — remark shows the rate and source; gross / TDS / net split visible; two-leg money trail on the page**	☐
3	Still as Admin (who raised it indirectly): try approving your own raise? Use Maker (**9999900002**) to raise one manually, then try to approve it as the same Maker	**Maker cannot approve at all; and a raiser can never approve their own — the segregation holds**	☐
4	As Checker → approve it → mark paid with a made-up UTR	**Approve then Paid; UTR stored; partner gets a notification**	☐

SUITE 8 · 5 MIN

Mobile — what he complained about first

#	Do	Expect	OK
1	Open the CRM on your phone, log in as Admin	**Menu hidden behind ≡; opens as a drawer; closes on backdrop tap, ✕, and after picking a menu item**	☐
2	Dashboard, Leads, Payouts on the phone	**No sideways page scroll; wide tables scroll inside their own box**	☐
3	Partner portal on the phone (**9820011001**)	**Same drawer behaviour, all screens readable**	☐

SUITE 9 · 5 MIN

Odds that bite in demos

#	Do	Expect	OK
1	Check a few timestamps (lead activity, last login)	**Indian time, not 5½ hours behind**	☐
2	Marketing (Admin): upload a small JPG → publish → download it as the partner	**Uploads as a tile with preview; partner's download lands in the history table with their code**	☐

#	Do	Expect	OK
3	Settings → rename a pipeline stage, add a sub-stage, then rename both back	**Edits apply instantly; stage list shows new names on the leads screen**	☐
4	Reports → export a CSV	**Downloads and opens in Numbers/Excel with sensible columns**	☐
5	Partner dashboard → "Reporting line" panel	**Shows who they report to with a tappable phone number**	☐

If you find a problem, report it like this

Which login + **which screen** + **what you clicked** + **what happened vs what you expected**, and a screenshot. That's enough for me to reproduce and fix same-day. "Payouts looks weird on mobile as 9999900003" beats "something's broken".

Known limits — don't report these, they're by design or pending decisions

· Bank transfers happen outside the system (UTR recorded after) — by design. · Partner share 60% / TDS 5% are placeholders awaiting his real numbers. · Bonus slabs are best-slab-wins pending his confirmation. · Lender regions = states, pending his states-vs-zones answer. · No mobile *apps* yet — the web works on phones; the apps are Milestones 3–4. · Girish may show "approved" already — the client has been clicking around too.
