QUOTATION · #24D-2026-KC01
Date: July 13, 2026
Valid for 15 days

PROJECT QUOTATION

Korean Cosmetics D2C — WhatsApp-First E-commerce Platform

A premium storefront where product discovery happens on the website and order completion happens on WhatsApp — with influencer attribution, a full admin panel, and no payment-gateway dependency.

PREPARED FOR

Iram · Korean Cosmetics Venture (Pvt. Ltd.)
ceo@swapgrocer.com

PREPARED BY

24dev — Web Development Agency

01 Our understanding of your model

Your customers browse a polished, beauty-brand-grade catalogue on the website; when they tap **Order on WhatsApp**, their full cart (products, quantities, total — and the influencer's reference code, when applicable) arrives pre-filled in your WhatsApp chat, where you confirm and close the sale. Every price below is scoped to exactly this flow. No payment gateway is included or needed.

02 Scope & cost breakdown

PHASE	DELIVERABLES	DURATION	PRICE
Phase 1 Store + WhatsApp Ordering + Admin	Premium storefront — home, category & product pages with video integration, motion/scroll animations and feature-visual sections (up to 30 products at launch). Cart with **Order on WhatsApp**: full cart details auto-filled in your chat. City-level visitor location captured on landing (IP-based). Core admin panel: add/edit/hide products, stock levels, order log. The foundation — everything needed to start selling.	2 weeks	**₹50,000**

PHASE	DELIVERABLES	DURATION	PRICE
Phase 2 WhatsApp OTP + Notifications	Customer login/signup via WhatsApp OTP (rate-limited, session-managed) and automated order notifications to your business number. Priced as integration-only: the WhatsApp Business API account sits in your company's name — Meta/provider charges (per message + ₹1,000–2,500/month platform fee) are billed to you directly. We charge only for the build, not infrastructure you own.	2 days	**₹8,000**
Phase 3 Influencer Affiliate System	Unique tracking link per influencer; attribution survives into the WhatsApp order (the reference code is embedded in the cart message automatically). Admin confirms orders → commissions auto-calculated per influencer, with a performance dashboard. Designed specifically for WhatsApp checkout — attribution is confirmed at order approval, since there is no payment-gateway event to track.	5–6 days	**₹18,000**
Phase 4 Offers, Combos & Stock Alerts	Combo packs, discount offers with date ranges, low-stock indicators with alerts to you, bulk hide/show of products.	3–4 days	**₹9,000**
Total — complete platform		**~4 weeks**	**₹85,000**

> **Free before you commit:** we will design one complete sample product page for any of your actual SKUs — judge us on your product, not our claims.

03 Technology stack

→ **Next.js 14 (React) + Tailwind CSS** — fast, SEO-ready, animation-capable frontend

→ **PostgreSQL** — products, stock, orders, influencers, commissions

→ **Custom admin panel** — no monthly platform fees (unlike Shopify); you own 100% of the code

→ **WhatsApp Business Cloud API** (via AiSensy / Interakt) — OTP login & order notifications

→ **Vercel edge hosting** — global CDN, handles influencer-driven traffic spikes

→ **IP-based geolocation** — city-level visitor location, no permission popups

04 Timeline & milestones

WEEK	MILESTONE	YOU REVIEW
Week 1	Design direction + homepage + product page template live on a preview link	Demo 1
Week 2	Full storefront + WhatsApp ordering + core admin — Phase 1 delivered	Demo 2
Week 3	WhatsApp OTP + notifications; affiliate system build	Demo 3
Week 4	Offers/combos/alerts + polish + launch on your domain	Launch

05 Commercial terms

→ 40% advance per phase to begin; balance on phase delivery

→ Two revision rounds included per phase; further revisions or new features quoted separately

→ Domain excluded (as instructed). Hosting runs on your accounts: ₹0–1,700/month

→ WhatsApp Business API: account in your company's name; per-message + provider platform fee billed to you directly

→ Full source code ownership transfers to you on final payment

→ Quotation valid 15 days from the date above

06 A transparency note on location tracking

Precise GPS location of a visitor requires a browser consent popup — a browser and legal requirement no agency can bypass. Our default implementation captures **city-level location silently via IP** on every landing visit (compliant, no popups); consent-based precise location can be added as an option.

07 Recent live work

→ **www.qcred.in** — fintech distribution platform: 119 pages, 30 financial calculators, lead systems, CMS

→ **motionlens.dev** — SaaS product with live payments and API integrations

→ **fulltossapp.com** — consumer sports platform (web + mobile backend)

We haven't shipped a beauty D2C yet — which is exactly why we offer the free sample product page above. We'd rather show you than tell you.
